

ODB Style Update Team Tutorial

Managing All Nations with the Dirty Editor

All Nations manageable with ODB Style Update Team September 2011 Data Update

Created 23/09/11

Download the Dirty Editor from [here](#) and unpack the program using 7Zip (recommended) or WinRAR

Run Championship Manager 01/02 and select *Game Settings* on the landing screen

Change the *Save Compressed* option to *No*

Start a *New Game*.

When the loading process is complete, create a new save by Restarting the game. You can leave the game open on the landing screen when it has fully restarted.

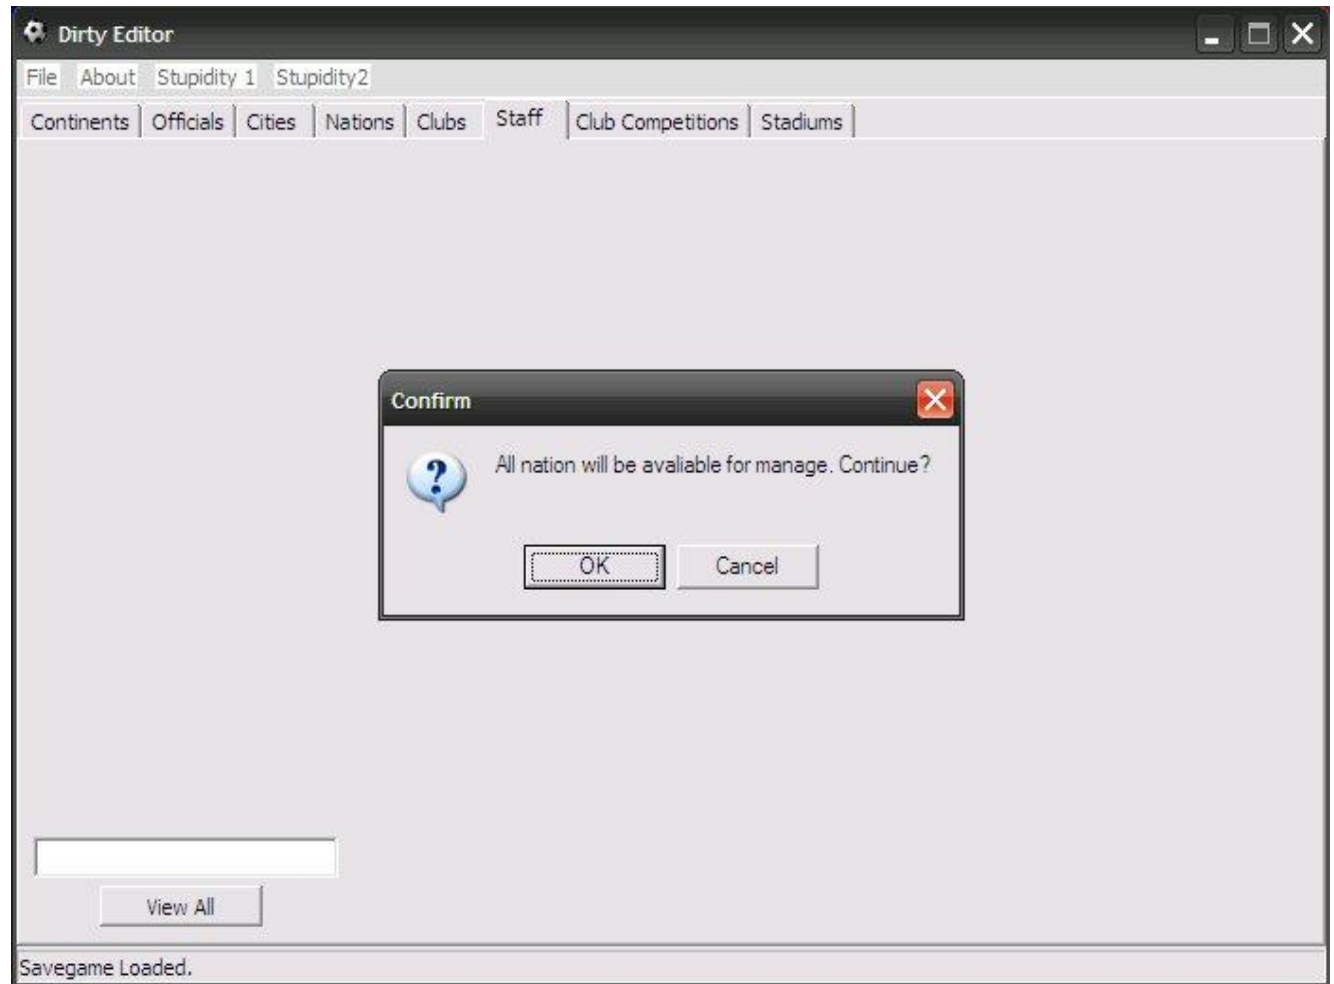

Open the Dirty Editor program, click *File*, then *Load* and go to C:\Program Files\Championship Manager 01-02 and select the new save game in the pop up window.

Once the save has loaded click on the tab/button called *Stupidity1*.

Select OK when asked "Make all nations available to manage. Continue?"

Click the *Nations* tab, then *View All* and press *Save*.

Now back go back to Championship Manager 01/02 and load the save game.

Go to *Game Options* on the left and *Add New Manager*. Then got to *Nations & Clubs* on the left, select a continent and then whatever country you want to manage and select *Take Control* in the top right hand corner of the screen.

Just switch to the original manager and use the *Retire* option to leave you in sole charge of your chosen country ☺

CMScout is very handy for managing international teams, especially the lower ranked ones. Alternatively type the nationality of a player in the Find search.

Special mention to a forum member and ex-ODB Team member Ratio for getting a lot of the smaller nations up to date, thanks for the great effort!

☺

Enjoy!
