MAC Problems & Queries (SOLUTIONS TO PLAY ON MAC POSTED HERE)

Feral has unleashed 3.9.65 patch for MAC users.

If you go on the link below, you get two download options.

* CM 01/02 3.9.65 Patch (With Data) - Includes updated player statistics covering the transfer action during that season.

* CM 01/02 3.9.65 Patch - This patch does not contain a data update.

Download Link

Eidos Official Game (3.9.65) For MAC.

Eidos Interactive official game (ISO) released for MAC users.

Consists of 7 parts of rar files, download the files and extract them to your desktop. Mount files using Daemon Tools.

Download Link

> ***Game .app keeps having a flashing light and crashed even after following the steps above***
> **Spoiler!** [Show]
>
> > *Try this. Follow it to the letter.*
> >
> > *1. Go to: Macintosh HD/Users/[your user account]/Library/Preferences.*
> >
> > *2. Delete CM3.config, CM 01-02 preferences and CM3 Hall of Fame. Anything Champ Man related. Including any CMEditor Preferences that*

might be there.

3. Drag your Championship Manager folder to the trash. (Backup any save games/tactics you want to keep and put them on your desktop temporarily)

4. Empty Trash.

5. Remove App Icon on taskbar.

6. Reinstall the game.

7. DO NOT OPEN THE GAME.

8. Open the .65 patch folder.

9. Copy the cm0102.app file to /applications/championshipmanager.

10. Click replace.

11. Back in the patch folder, copy everything in the data folder.

12. Back in /applications/championshipmanager/data paste all the files.

13. Click replace.

Now open the game and it should work fine. It will come up with the preferences when you open it.

Let me know how you get along. It is vital you don't open the game before patching it. Just makes this easier encase something goes wrong, that way I know exactly what you have done.

Network game issue
Spoiler! [Show]

Right nothing to do with patches. Think the issue lies with the router. Just as the windows version is. Difference is that it seems the mac version won't even create the game without having an IP it can set it to. You need to open TCP and UDP ports 6667.
www.portforward.com should help you with opening ports.

Show you exactly what it says for MAC;
Spoiler! [Show]

The network play option uses TCP/IP. How to set up TCP/IP varies depending on your situation.

If you are connecting via a dial-up connection to the internet, you will already have TCP configured.

If you are on a company network, contact your network administrator for configuration instructions.

If you have simply connected a number of machines together with an ethernet in order to play CM, you can do the following for a basic TCP/IP setup:

o choose a unique address for each machine - a good range to use is 10.0.0.X, where X is a number between 0 and 255.

o open the TCP control panel (found under 'Control Panels' in the Apple Menu).

o choose the following options:

Connect via: [ethernet]
Configure: [manually]
IP Address: [the address chose above]
Subnet mask: [255.255.255.0]

o Leave the other fields blank, and close the TCP/IP control panel.

NOTE FOR MacOS X USERS:

Under MacOS X your networking settings are configured in the 'Network' section of the 'System Preferences' program, which can be launched from the Apple Menu.

Before anything concentrate on opening that port.

Opening the .sit file
Spoiler! [Show]

The .sit file is like a zip file on a PC. You need to download stuffit expander (free)

http://www.stuffit.com/mac-expander.html

Make sure you choose the Suffit Expander Only option as you don't need anything else to open .sit files.

I'm running CM 01/02 on CrossOver on my Mac. Was working like a dream, but today I've started getting the "not enough system memory" error and I can't open the game. Any advice?

Do you mean your current games? Theres this: http://www.codeweavers.com/support/w...l/programfiles

But I also found them this way: when you are in the Finder, go to the toolbar at the top and click on Go. You'll see a list of locations/applications (All My Files, Desktop, Documents, etc.). Hold down the Option key, and Library should pop up. Click on this, then you should see a list of folders. Click on Application Support. There should be a CrossOver folder there, and open that and navigate to your bottles.

Mac gamers:

Using Wineskin will allow you to play the game on Mac without problems :-)

You'll need to force windowed mode and Direct3D off in order to work properly. If any interested I could show the few steps.

Thanks for the updates, I loved 00/01, so I'm giving this a try.

mac problem

Having read the FAQ, there's a problem mentioned that happens when I try and start the game on my imac - I just get a flashing screen with the game sounds, but I can't see the start up menu for the game. Does anyone know how to fix this problem?

Yep, on the FAQ it acknowledges the problem, but doesn't tell you how to fix it!

"Installed CM on Mac OSX 10.7.3 on Crossover Games, when I start the game I get a graphical glitch, the screen in black but the game is running I just can't see it properly, anyone know how to fix this?"

I've tried to run 01/02 in both Crossover and Wineskin - with both, CPU core temp rises to ~95C and fans go crazy even when resting on the menu screen. Is this normal? I would have thought that a 2011 Macbook could cope with a 10 year old, graphically simple game.... Are there any ways to prevent it burning my MBP up - any way to limit CPU usage for a particular app, for instance??

Thanks in advance!!

MAC issue

Hi

I've downloaded the game and unrar the zip file. I have mounted the iso file but cannot autorun or use setup.

My options are:

autorun.exe - autorun.inf

setup.exe - setup.ini - setup.ins

None of these will open as they're a Windows file.

Any help would be hugely appreciated.

Thanks

Mac User needs help

Hello,

I've played CM since as the early days on Amiga right through to downloading the patches and updates for CM 01/02 until a year or two ago.
Problem is, I've changed from PC to MAC and I wouldn't have a clue as to how I can download and play CM01/02 with latest updates.

I don't really want to run Windows as a virtual machine.

Can anyone help?

Thanks for reading,
Dave.

P.S> Please don't shout at me for not searching forums or the like, I wouldn't have a clue where to start.

Thanks for your reply. The link you provided discusses issues when playing or updating the game assuming the user has a Mac copy of the game, which I don't. If you can provide any advice as to how I obtain a MAC copy of the game it would be appreciated.

Thanks again.

Hi^^

I have the Championship Manager 01/02 game (this version: http://www.amazon.co.uk/Championship...500228-3149134) and when everytime I try to install it on my mac-mountain lion (following this tutorial on how to work with crossover: http://www.champman0102.co.uk/showth...01-02-on-a-Mac) there appears a blank screen entitled 'Welcome to Championship Manager 01-02 Setup'. When that first appears there comes the sound common with the setup and it also appears that the setup is 'under' the blank page. I just can't see it since it's all... well, blank.
Here's a screenshot of it
_____

I then tried installing it in a different manner - instead trying to install thru the cd I went and selected the .exe file and the patch file (separately) from the cd and installed them. Then when I click to play the game the problem is basicly the same: you can hear the sound of the game and you can see that the game is 'behind' the fuzzy screen. Here's another screencap

Can someone help me, please?

Downloaded the files from the Download Link above, can someone give me a step by step guide as to how I mount these files?
Do I need to download the trial version of Daemon Tools and use this to move the files onto a CD?

Any help would be great, thanks.

MAC download
_____

Hi guys,

I tried to install the latest Sep data update on my MAC but the game kept crashing so un-installed to download again but now can't find the original MAC download for the game itself!

Can someone point me back in the right direction?

cheers,
Pete

I suggest you use "Parallels". You can use a version of Windows in "Parallels" and then install the game.

Wondering how to get the tapani 2.19 patch working on a Mac. Got the game working fine with the march update, but really want that patch applied. Downloaded the exe file and tried running it through crossover and it doesn't do anything. Any ideas?

His patches won't run in Wine either, so I've had to install them on my Windows pc and copy the modified exe onto by Linux.

Some aspects of his patches are included in the JLPatch: http://www.champman0102.co.uk/downlo...do=file&id=152.

What computer do you use for CM10/02?

Hi there

I'm looking to buy a new laptop. Sorely tempted to get a MacBook Air but is it possible to run CM01/02 on it?

What computers/laptops do people use? MBA is extremely expensive and I wonder whether it is a suitable machine

Any info greatly appreciated

Matt

It'll run on any machine mate.

I play on a tiddly little ASUS netbook.
MBA would run it fine but it's always harder to find tutorials and walkthroughs for anything you might download from here (updates, tools etc) for Mac's than it is for Windows.

Mac Version download?

Hi, i registered here a long time ago, but i think all the threads and usernames have been deleted. Maybe about 18 months ago, i downloaded and installed CM01/02 on my Mac, and i made a thread with the link for everyone to download it, along with the instructions for how to update it.

I was just wondering if any AMAZING soul could be kind enough to upload their copy of the game for Mac? I know you can buy parallels and get it working, but it's a bit annoying to run it through there, and i couldn't get any updates or anything working with it. Also, right clicking didn't work for me with that. Unfortunately my last computer died, and i can't find a new link to the mac version

Thanks for any help, sorry to be a pain

Have you tried installing Crossover games? Thats how i run CM on my MAC, it does cost though but never had any issues with it or the updates.
Tapini patches will not work though.

installation on a mac os 10.5.8

hi guys, sorry if i sound dumb but im new to all this.

ive downloaded the game from here, and have the zip file which i can easily "unzip" i then get what looks like a virtual drive on my desktop but inside that drive are a load of pc files which i cannot run.

I was under the impression that this was a mac compatible download? am i wrong or is their a seperate mac version somewhere?

Not sure you can get the MAC version but if you do i'm pretty sure non of the updates uploaded on here will work.

Ive managed to install CM fine with crossover. The patch seems to install fine (although its not showing that its patched, but i think i know why)

How did you get the latest updates to work though? Ive downloaded the March2013 update, but cant work out where to put the data files.

isnt that for using a mac os on a pc? i don't know

why was the file taken down? i remember there was a megaupload(obviously offline) and rapidshare link and im pretty sure it was a rar file, does noone still have it? it should be on the site to make it as easy for mac users as it is for pc users

We move server and the links for megaupload and rapidshare were dead. No point in adding empty files to the download section

> **Originally Posted by umtankie** ▸

It would be if anyone had a copy . . . .

There's still only about 1 in every 1000 members mac only users.

I went to the folders you mentioned and there were no such files, nothing related to championship manager.
This is what I did.... downloaded the game, saved the folder to my desktop and tried to run it... the same thing is happening to me.... black screen and crashing, unallowing me to change its settings...

Since there is no files that u mentioned, what would be the solution?

Thank you!

i appreciate the responses dermotron,just quite annoying

do you know of anyone here who operates it on a mac using the mac file? who uploaded it
originally? was it eidos? feral? or did someone with computer skills make it using the
windows version?

Hi everyone,

Thank you for putting this resource together. Just following samorsbag's question - I'm on a Mac and am trying to install the March 2013
data update. I've downloaded it, but can't see where the files I need to replace (as at http://www.champman0102.co.uk/showth...13-
Data-Update) are. Where would my data editor folder be on a Mac?

Thanks.

MAC install file?

Hi Guys,

Anyone know where to get and how to install CM0102 for MAC and with the updates?

Cannot find the downloads anywhere but saw there were MAC related posts so assumed it must be about.

Thanks in advance.

Jimzoaar.

Hi All

I am trying to install and run the game on my mac but am failing miserably. Is there a kind soul that is able to either give me a step by step guide for the easiest way to get the game running or at least point me in the direction of where a step by step guide already exists.

Is there a separate download for mac?

Thanks in advance for any help.

Are you trying to install the Macintosh version?

I would use crossover and install the pc version.

One of the Mac users should search this site for a mac version http://www.feralinteractive.com/en/

According the book with game that site may have the download. If so post a link here and we'll add it to the download section

If you can manage to get CM installed on your mac, I don't see why not. Just make sure you have the same patch installed (possibly just the 3.9.68 SI Games patch?) and then you can copy it from laptop to laptop.

Use Crossover or a wine prefix!

The Mac version was a poor performing port.

Hhhmmmm, ok. If I have to start a new career, then I'll do that.

I see all the tutorials for MACs, are there issues with running CM01/02 on MACs? ODB or updated versions?

Please help me before i ACTUALLY go insane

There is not enough system memory to continue the game.

Blah blah. I know there are other threads with this but cant seem to find an answer. I am a MAC user and it runs fine with crossover. BUT, I keep getting this damn message, and dont know how to get rid of it on MAC and crossover. Please someone help me. I have just taken Telford from the conference to the Premier and I cant lose this game.

Many Thanks

If you double click into an ISO file your mac should auto mount it.

You should then be able to install the game.

ok, so i used the tutorial to install cm0102 on my mac. excellent!

i tried to follow the instructions to install the patch/sept 2013 update. however, point 17 asks me to:

17) now for the patch. in crossover, from the menu bar, select configure > install software.

i can't open crossover anymore. i can left click on it but i don't get a menu bar or the opportunity to configure anything.

i'm clearly missing something.

anyone able to help?

ok, after a lot of messing around. so i managed to install the game - and eventually the official patch.

i've also downloaded the sept 2013 update but when i run it through cross over, it has problems "doing it".

any ideas?

if the game runs on your mac, it should be a simple process to overwrite the existing data files with the new ones..... the files are the same format, they just contain different data

Found the answer in the forum!

"Do you mean your current games? Theres this: http://www.codeweavers.com/support/w...l/programfiles

But I also found them this way: when you are in the Finder, go to the toolbar at the top and click on Go. You'll see a list of locations/applications (All My Files, Desktop, Documents, etc.). Hold down the Option key, and Library should pop up. Click on this, then you should see a list of folders. Click on Application Support. There should be a CrossOver folder there, and open that and navigate to your bottles.

http://www.officecafe.com/blog/2008/...ver-mac-files/"

Perfect 😵

MAC Problems & Queries

If you want to know how to put Autumn Update files on game then extract the data files from Autumn Update and copy (and overwrite) the current data files (which would be ODB data). This is usually in data folder in CM0102 folder in program files
Simples?

Unless Mac doesn't have files/folders etc!

Langlib and Game_config whilst installing for Mac...

Hi everyone,

So I've installed CrossOver, installed the program (I think) But at the installing the game stage I'm getting the Langlib.cpp389 & Game_config.cpp84 Errors. Any ideas why? One of the alternatives is to set the dataset pathway to the correct option. What does this mean?

H

I think since he is using Crossover it's a windows issue and looks to be the issue from the FAQ

have you gotten anywhere with this?

i still can't install the updated version of this game.

can anyone help me? please, for three months i've been trying to get the updated versions of cm to work on my mac. i've asked various questions in other threads but I'm still nowhere.

i can run the original game but i cannot get the updates to work. please!!! can anyone help? please!!!

i have crossover.

ok. that gets me into the bottles and i've found a folder called "data" that seems to have similar things in the update package. but when i paste them into it & try to start a game, i get this error:

v3.9.60 index..cpp 5773

ok thanks. really appreciate this.

edit: where do i find that? i've looked in the download section but can't find a patch called that.

edit 2: ok, found it - it was in the *data updates* section not the *patches* section.

cheers guy. you have no idea how happy i am.

Hello all,

I use CrossOver 13 to run the game and it overheats within a few minutes of loading the game, the fans work like crazy.

I have a new macbook air so my guess is that CrossOver uses all of the CPU usage... I can't continue to play the game in these conditions...

Do any other Mac users have the same issue? if not, what version of CrossOver are you using?

Thanks in advance!

Yes, it gets warm quickly but I can't say it bothers me too much however.

But I find the battery more frustrating as drains exceptionally quickly. My normal battery life is somewhere around 8 to 10 hours. With the game running it's somewhere between 2 to 3 hours.

Have you tried contacting crossover? It's definitely that as it happens whenever I use crossover.

Psmith
Unattached

The battery definitely drains quicker while running CrossOver. But I'm more worried about the heating, since the computer might wear out faster. And it was expensive as hell.

CrossOver has a support forum http://www.codeweavers.com/support/forums/ I had a quick look but to no avail. I might have a bit more time to delve into it during the weekend, if I find a solution I'll post it here.

You could try plaonmac?

Also use tapani 2.19 for the idle patch as this helps.

The patched exe works fine. It is applying the patch that is a pain. If you download virtualbox you can create a small Windows XP installation and use that to patch the exes.

I have the exe patched at different speeds so can provide you with that if you like?

Where can I find the Mac version of this game?

In downloads I only see one version. I've installed it but can't get it working on my mac.

From a tutorial on youtube there seems to be a mac version in downloads but I don't see it.

Thanks

From what I know you need to download a windows emulator, I don't have a mac so I'm sure what's available. You can run windows programs including this fine game with one!

My advice would be to download the Windows version and install with playonmac 😊👍

The Mac version of the game was extremely slow compared to the Windows version.

Do you have an actual copy of the game for Mac? If you do could be handy sharing a copy on here 😊👍

The updates won't work for Mac as the last patch for Mac was 3.9.65 and Windows was 3.9.68 which the updates are compiled on.

You can use some suggestions from the Mac Thread on how to play the Windows version on Mac

You can add your tactic to the Tactics folder found at /Users/yourusername/Library/Application Support/CrossOver/Bottles/yourbottlename/drive_c/Program Files/Championship Manager 01-02/tactics

How to update to 3.9.68 on a mac

I can't seem to update the original game to the 3.9.68 version on my Mac. I run the patch, install it (it shows me that the game has updated to the new version) but when I start the game it stills run the 3.9.60 version. Am I doing something wrong or is this just an issue on all macs?

Hi. I'm having some major issues with trying to install and play the game on a macbook. I'm getting nowhere! Is anyone able to help by providing a more up to date/fools guide to how to install and play CM on a Macbook? I've tried to download the game from this site but after the download doesn't complete it says network error (or something like that).

Any advice or guidance please??

1. Download playonmac
2. Download cm0102 iso
3. Mount cm0102 iso
4. Open playonmac
5. Click install
6. Make sure to choose "Install from exe" and not from CDROM

Let me know once it has installed.

Installable for Mac

Hi all,

was aware there was an installable available for Mac some years ago. Is it still available?

If yes, can someone give me a good link for download?

Currently I am running game from Virtualized XP on my Mac.

Many thanks,

Ivan

Playonmac works except I have a problem with the mouse. When i click I have to click once more to see it happen.
Let's say I want to start a new game so I click on "Start New Game" then I have to random click on a button on the next screen (still seeing the first screen) and then the choose countries screen appears.

Anyone with similar problem and perhaps a solution?

Hi ivanlegra,

I have moved your thread into our Technical Support area.

As far as I'm aware, there is no download available the mac. The only way mac users have been able to get CM 01/02 running is via a crossover or using a Windows partition.

I would really like to get my hands on a mac copy of the CM 01/02 disc that Eidos made but every time I look for it online, I just can't find a copy to purchase 😞 If I could get it, I'm sure we could make it available to download without causing issues as they made the Windows version available for free.

> *Install the game and then follow the steps to patch the game to .68*

finally has some time to sit down & install it using this guide.

many thanks

i am having some issues getting the update to work. any ideas?

i'm playing on a MacBook.

i used "running CM on Ubuntu/Xubuntu" guide to help me install the original game & the .68 patch/update.

but i can't get the latest update to work. any ideas?

also, when i tried to run the tapani patch, an error message popped up.

still can't figure out how to play the updated game using *playonmac*.

ze, any ideas? i tried to follow the concept of: GO > hold OPTION > APPLICATION SUPPORT >

but there isn't a folder for *playonmac* like there is for *crossover.*

any one able to play the updated game using *playonmac*?

EDIT - After playing around, I figured it out.

ok, how to update CM0102 using playonmac.

This isn't how i did it originally but i've re-installed etc and went through this process again to ensure it works.

make sure you have .68 patch installed. I have yet to get any tapani patch to work at all.

1. download the update called "October 2014 Data Update" from the download section.
2. keep this folder open for later. you can minimise it if you want.
3. mount the CM0102 iso.
4. open playonmac.
5. in playonmac, click on your "CM0102" game.
6. click on "configure".
7. click on "miscellaneous".
8. click on "open program's directory"
9. find the "data" folder.
10. return to your downloaded update folder that you minimised earlier.
11. copy all the files inside the "october 2014 update".
12. go back to "data" folder that you found in the playonmac program.
13. paste all the files from the "october 2014 update" folder into this "data" folder.
14. close playonmac.
15. un-mount/eject the CM0102 iso.
16. re-mount CM0102 iso.
17. play the game.

it works with the CMScout & cmexplorer though i'm not a great user these tools.

both of these are done by following the above steps 1-7 and then following these.

8. click on "run a .exe file in this virtual drive".
9. locate the downloaded tool folder.
10. locate the .exe file for that tool.
11. let playonmac do it's thing.

at the moment, you have to do these last four steps (8-11) overtime you want to use the tool. not great but i don't use them that much.

just got GK's editor to work - not tested though. installing this wasn't as straight forward. let me get my head around it and i'll post the steps to get it working.

i cannot get any of the JL stuff to work but i'm gonna spend today (snowed in) to figure it out.

Has anyone managed to change or add fonts using *playon* etc?

also, i see some people have the different colours for the different attributes in a player's screen. has anyone managed to do that using *playon*?

it is but payonubuntu and playonlinux seem to follow the same logic & process.

i gave up on crossover. playonwhatever works much better. i've managed to get CMexplorer, CMScout & the GK editor to work properly
with playon but the when i follow (my assumed) process for the tapani patch, i get an error.

i'd really like to be able to change the colour of the attributes on the player screens.

mini update

having been trying for almost around a week, i have not been able to come up with a way of using the tapani patch with *playonmac*. in
theory, because it's an .exe file, it should work the same as the .68 patch (following the instructions found on here - but it does not. this
error comes up:

equally, i am still not able to figure out what to do with the JL patch.

are there ay mac/ubuntu/xubuntu users out there using *playon*- who have managed to get these patches to work?

bump.

it seems as though no one has managed to get the tapani or JL patches to work using playonmac/ubuntu/xubuntu. it has been suggested
that the J patch can be installed on a windows machine and then tanker the whole thing to the mac. i'm going to try that sometime soon.

will keep people updated.

(that's if i can find the "how to install the JLPatch" thread. i swear it moves overtime i look for it. 👋)

Applying it is difficult, you will need a virtual box.

Or use this exe, Tapanified 2.19 https://www.dropbox.com/s/6bhn533e92af0gz/cm0102.exe

OMG - i have a tapani patch working on my mac!!!!!!

ok, is it possible to change the start date? aren't there rules on which year you must start it on?

edit: bollocks. it's stopped working.

edit 2: the patch is no longer part of the setup but i'm getting these two errors when i save:

any ideas?

MAC question
_____

Hi,

another question from those of us daft enough to own a MAC. Is it possible to play this via crossover but without a disc?

K

yes - but seriously, use playonmac instead of crossover. IMO, it's far superior.

ⓘ Mac version

Apologies been out the game for a while changing computer to Mac, is there a Mac version i can download and update the latest changes?

use the game that you can download from this site. download *playonmac* & install it (far better than crossover IMO). find the ubuntu thread and follow their instuctions for *playonubuntu* to install the game.

works a treat. can't install patches but the updates are relatedly simple to do and you can use in-game editors.

let us know how you get on.

Psmith

Hi ajra21,

I'm curious on why do you rate playonmac above Crossover? I use Crossover myself and it works great; I can even use some of the tools (like the recent tactic editors, the colour editor, or any tool that uses an *.exe file really.)

I don't use the tapani patches.

It would be great if JL could do a version of his tools that function with an .exe file instead of .bat (not sure if that's possible though...)

I have the same problem and can't seem to find a solution.

The problem is so big I cannot play the game after I finally managed to install it 😦

The mouse does not seem to react to the correct buttons and the screen reacts just the same as described above.

Program Error While Playing

I'm currently playing CM01/02 on my Mac through Crossover and when the game tries to progress through 30th August 2014, this error message pops up:
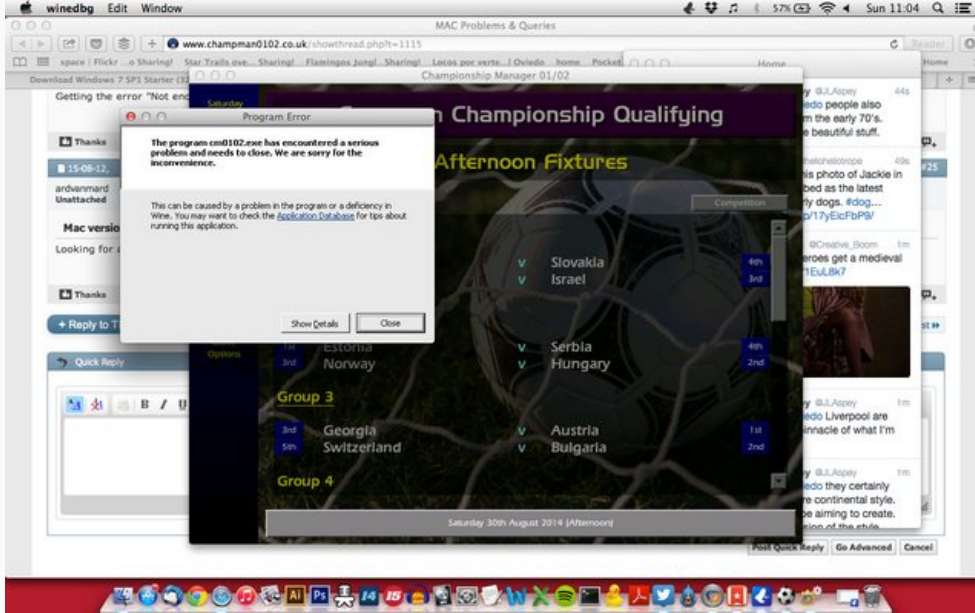

I've tried unpatching the cm0102.exe file and changing compatibility to Windows 98/Me but to no avail.

Here's the error log:

Spoiler! [Show]

I'm not holding out much hope but if anyone could help, that would be brilliant. And please, no "you should have got a PC" jokes.

Thanks in advance!

Have you read through the specific Mac thread?

http://www.champman0102.co.uk/showthread.php?t=1115

if someone had the original copy of championship manager 01/02 for mac would it then be possible to for mac users to download and play straight off...? this would be fantastic - let me know as I may be able to help... saves downloading all these programs would make a lot mac users very happy!

please pm me about this prospect.

Championship Manager: Season 01/02 is a football management computer game in the Sports Interactive's Championship Manager series. It was released in October 2001 exclusively for PC and for Mac in November 2001. It was also later released on Xbox in April 2002. It was released as freeware in 2008.

problem is the mac version would need to be patched will be interesting if anyone on this forum would be upto the job... 😎

sorry jack for the delay.

crossover was a pain for me. the tools would crash and i often couldn't get some of the tools to work, it would often require me to re-install the game even though it should have been running fine.

playonmac just runs much more smoothly. the tools work without issue. just wish i could get tapani to work.

Hey there,

I have searched for it and never found it, what's more I don't think the Mac version of 01/02 would function on the new Macs.

I use CrossOver (version 13.0.0) to run cm 0102 and it works fine.

From Reddit

> *3.Open up PlayOnMac and click 'install program' then in the bottom left hand corner click 'install a non-listed program'*
> *4. Install a new program or virtual drive, you'll be asked to give it a name call it whatever you want I just named my drive CM0102 so I know what it is.*
> *5. You'll get three option 'Use another version of Wine, Configure Wine, Install some libraries. Leave all 3 unchecked and click 'next'*
> *6. Your virtual drive is now installing, this will take a few mins, be patient and wait. When it's done chose 'select another file> browse' select 'setup.exe' from CM0102 (disc/iso) click next.*
> *7. Now you'll be going through the installation process as it would have went on PC all those years ago. If there's any problem here let me know, but I assume you can take it from here. (You may get screen resolution problems from running in fullscreen it's just a matter of trial and error and clicking till you get it in 'windowed mode', other than that you're golden)*

So ive managed to get it working for my macbook but my mate has a macbook air which doesnt have a disk drive. Any idea how he'd get this running?

Hello lads, wondering if you can help me.

I downloaded the game and had it working fine on CrossOver, but it made the macbook alarmingly hot and had it sounding like it was about to blast off into outer space. So I got playonmac instead but I can't get the game to work. I followed the instructions in the above link, but whenever I try to start the game, the screen either goes mental - with random colours and bits of the desktop splashing up or it just goes black. I hear the sound ok and can see that the mouse can still recognise the start game button etc. but I can't see anything.

One thing I have noticed is that when I go through the installation process, I never get the option to choose between 32 bit and 64 bit windows installation but I have no idea if that's got anything to do with it.

Any help would be greatly appreciated.

Cheers.

So I got playonmac instead but I can't get the game to work. I followed the instructions in the above link, but whenever I try to start the game, the screen either goes mental - with random colours and bits of the desktop splashing up or it just goes black. I hear the sound ok and can see that the mouse can still recognise the start game button etc. but I can't see anything.*
>
> *One thing I have noticed is that when I go through the installation process, I never get the option to choose between 32 bit and 64 bit windows installation but I have no idea if that's got anything to do with it.*
>

>
> *Cheers.*

not sure why this is happening. it never was an issue for me. i'm sorry - i have no advice.

as for the heating (& quick battery use) it happens on playonmac as well. all of these "emulators" cause these issues.

Right Click on macbook track pad?

How can I right click on the game???

Help please 🙂

How do you right click in the game with a trackpad?

Obviously I know how to use the track pad when using mac, but I just don't think it registers the right click in the game

have tried right-clicking in the game but nothing happens so i suspect this is the same for the trackpad.

There's no such thing as right-clicking within the game, is there?

wow. this is awesome.

did you play the last one?

- - - Updated - - -

also, all the tools have stopped working for me. maybe it's the move to el capitan?

ok, is anyone else having issues with playonmac and the editor tools? they semi-load but then can be used. the icons aren't there.

it seems as though the recent update to el capitan might be the issue. anyone else having issues? can't even run the official editor.

of course. i have a mac and use a mouse. the right-click works fine on that. not a trackpad fan.

Just use the JL .exe file then you won't have any problems with heat or battery usage.

I think i solved the taipan issue, however it is a little bit of work. I installed CM in virtual box and applied the patch, then it should be possible to copy the exe and use it on any mac. Going to run a test game now.

Edit. I created a new game with no problems whatsoever.

First of all this only works if you run CM in crossover or playonmac.

1. Install CM and patch to .68 which you can find in the downloads section.

2. Then you need access to a version of windows, either a via a pc, or as I did via the free app virtual box which requires a copy of windows.

3. Install and run the Tapani-patcher on the windows machine following the walkthrough here on the forum.

4. Go to program files/championshipmanager0102/ and copy the file cm0102.exe

5. Paste the file into your your cm folder, replacing the original cm0102.exe. and done.

If you cannot be bothered here is a link to an exe I have updated https://www.sendspace.com/file/ah4ve1

Starting year 2001 2x or 3x speed I don't remember.

Just download it and replace your .68 exe.

---

wow, thanks. most grateful. got a busy couple of days but will try this soon.

edit: holy crap. it works. amazing. just amazing.

gotta play the games on *fast* speed rather than *very fast* but it is great. thanks *kaf*.

anyone else having issues updating playonmac (version 4.2.9)?

---

so, i can get playonmac 4.2.9 to semi-work. it won't install but i can kinda load it up each time and then get the editors to work.

I have installed with crossover and it worked but the problem is Daemon tools. I have tried that as the iso mount application and right now its trial period is ended. Do you have any suggestions for the free clone cd program?

> 🔁 Originally Posted by **ugurog** ▶

playonmac

---

while this "worked" i've had two careers crash and stop working altogether. one through up an error, the other just stopped working progressing passed a certain date.

maybe have to completely res0install without this tapani patch.

managed to work around one error/crash on one career by retiring, letting the game play on for a week and then taking control of the same job.

during that five days without my control, the team dropped 5 points to teams in the relegation zone & annoyed a group of players through various means. thankfully, i was cruising to the german second division title so those points didn't hurt. the players on the other hand have been harder to turn around.

Can someone please help. I dowloaded crossover and managed to get the game working, but only with the old players data (01/02). I have downloaded playonmmac, and have tried in vain to get the updates, but nothing works. How can I get the updates for Mac? Help would be really appreciated!

Hey Karelia.

Some points:

1. Crossover works fine, you don't need Playonmac;

2. Have you downloaded the data update?

2.1 If so, you have to replace the data folder in order to get the new players in.

I know what the problem is.

Here's what you must do:

1. Go out and buy a PC.

Just joking.

1. Don't run the data update through Crossover!

2. Install the game + the official .68 patch using Crossover.

3. Now, any changes you want to make to the game (like installing the update) you have to do the following:

- open a finder window,
- press "go"
- click on "library" - application support - crossover - (not completely sure from here onwards but) - bottles - cm0102 - whatever - whatever - until you find "DATA"

Copy the contents of the update to the data folder.

While you are at it you should replace the cm0102.exe file with this one:

http://www.champman0102.co.uk/downlo...do=file&id=151

Hope this solves it.

Do you mean open the Editor (CM0102-3) and replace the files there? I couldn't find the "library" through the finder window etc.
Maybe it is simpler to buy a PC!

Karelia,

I'm sorry, I forgot a crucial step!

1. Open finder;
2. Press "Go" (from the drop-down menu above).
3. Press "alt" (you will see the "library" option appear")

Sorry!

Hey Ajra,

That patch adds coloured attributes and prevents my computer from heating up.

But I actually use this one

http://www.champman0102.co.uk/showth...?t=5737&page=5

that saturn was kind enough to prepare for me 🙂 (this .exe file makes it easier to change jobs between foreign clubs).

Hi Jack_Rabbit,

Thank you! I found the data folder, deleted the old information and copied the new folder. But, now the game doesn't open as it says there is an error message "Unable to load the fonts".

I must sound like an idiot, but what now?🙂

Ah, you see, you didn't follow the instructions with precision. You should have copied the contents of the update into the data folder, you have deleted vital data information...

You need to install the game again and afterwards COPY the update into the data folder!

that saturn was kind enough to prepare for me 😊 (this .exe file makes it easier to change jobs between foreign clubs).

that's what the patch i use does too. it was made by *zaf* & posted earlier in this thread.

i'd like patch that allows me to start in the correct year.

😊🕯

haha, don't worry. this stuff isn't straight forward. it took me a long time to get CM running the way i wanted and the recent OS update has made a couple of things more tricky.

Ah, yes, I am fiddling with various permutations, trying to make it work.
Is it possible not to use a CD when playing this game? After I updated the .68 version (from .60), it now asks for a disk.
Now, trying to work out how to do the actual player update, too. You have been such a good help - clear and to the point, and I still cannot get the damn thing right 😊

So, I've installed the game, patched to .68 and just have one more thing to do, Tapani my .exe file. I get the Tapani patcher working through playonmac but it can't seem to find the place where my cm0102.exe is located, not even when I search manually. Is there a simple way to go around this problem? I'm not sure if I can move my whole cm0102 catalogue to another place on my computer that's findable from the Tapani program.

Hi guys,

Successfully managed to install CM 01/02 using Crossover for MAC and installed the patch. Played last night until the early hours then closed it without saving. Is there anyway I can get 18 months of hard work back somehow?

Thanks,

Tom

Aye pals now only struggle is that it keeps asking for the cd. Worked just fine before. :/

edit: solved now I think. I'm a freakin' champ!

do you have a delorean?

if not, no. sorry. save every week, sometime twice.

ⓘ Downloading and playing on Mac Air

I used to love playing this game, and want to play once again.

Can anyone help, or suggest how to play on mac air?
I've downloaded the free game and that is as far as I have got.
Thanks for your help.

http://www.champman0102.co.uk/showth...280#post217280

Oh my lord, can't believe I've managed to actual get it running on my iMac. Used Wineskin, took about 15 mins. Bye bye social life! 🤷

Has anyone managed to alter the resolution? Admittedly it sits nicely on my 27" screen so I can "work" whilst playing CM, but I could do with it being a touch larger.

Really owould be grateful for some help. I managed to a certain point but can't seem to move beyond.

Downloaded Playonmac and Wineskin with differed results.

With Playonmac I managed the installation but run into the screen glitch. The program always goes into full screen. I understand from the instructions that I should go into windowed mode. My problem, I don't know how to do that. Maybe that solves my problem.

With Wine I can get it to work it in windowed mode, so I see everything alright by it wants me to insert a CD after choosing the leagues. Any idea how I can move past this?

I've read the instructions on page 1 but I have problem understanding them. My impression is that those are for the dedicated Mac version, not this Windows/Mac solution.

Thx for any reply

I don't have a MAC and haven't ever installed it on one but the "insert a CD" message could be solved by burning the iso to a disk and putting it in your disk tray (assuming that MACs have a disk tray... I wouldn't know). Another option is to mount the iso using a VirtualDrive but I don't know how that works with MAC.

Mac compatible updates?

Are there any mac compatible updates? The April 16 update looks amazing. Does it work with Mac?

I have the game running and installed on my Mac at the minute but would like an update.

Any ideas?

No. The updates are on 3.9.68 patch, only 3.9.65 was released for Mac.

Doesn't Crossover allow Windows run on Mac though? That not solve the issue?

I have downloaded the April update. However I don't know what to do with it next? On a Windows PC I would just copy and replace the files in the data file. Any ideas in Crossover?

That doesn't really make sense as the game can't be saved as an application. Would love it if somebody knew how to put the April update on a mac!

Can you post it out to others please?

Thanks for your help.

Read back through this thread is your best bet I'd say. Look for ajra's posts perhaps

No sure what you mean by 'post it out to others', no idea if there's even a regular member on here that uses Mac

Hey there Mr Wadsworth

Here's what you have to do:

1.) Open a finder window

2.) Go to "Go" and press "alt" the option to click on "Library" should appear. Click on that.

3.) go to "application support" - crossover - bottles - etc etc until you reach your championship manager data folder.

The rest is the same as a PC

enjoy!

If it works the same as a PC then you can download a virtual drive.

http://champman0102.co.uk/downloads.php?do=file&id=2

Hey guys, I have a big problem. I can't able to install 3.9.68 patch with crossover for mac.
Do you have any suggestion for me?

The error message is "unable to find cm01/02 installation". But of course I have already install cm01/02.

Newby here guys, so go easy!

I'm on a Mac, and I've found the thread for installing CM 01/02. I fancy having a go "out of the box" but I would imagine that at some point I will go for the April 2016 update.

I guess my main question is - where should I start? I've seen a few mentions of a patch around while browsing - should I download that straight away?

No idea how Mac works (post there and you should get help)

But general install is below

Install game
Install 3.9.68 patch
Install April 2016 update (assuming you want to play with 'todays' players)

Then you may want to install latest Tapani patch

Getting started on Macbook Air

Hello fellow Champers,

Could someone please let me know (step-by-step please 🙂) how to get started on a MacBook Air to be able to play Champman with the latest updated player / team data?

Thank you in advance!

A Quick question.

Basically i have Cm01/02 installed on my Macbook Air. Somehow i had also managed to install then 2.19 Tapani Patch on it and Data Updates were very easy to copy paste.

Now, basically i am trying my level best to Install Tapani 2.21 version using CrossOver software. (Which i used back then to install 2.19 version).

But for some odd reason, The new patcher opens up, asks me to patch the Cm0102.exe file, when i try to patch it, nothing happens.

Very strange, as uptil now, everything has worked as intended.

dunno what i am doing wrong and its doing my head in. When i open CM, it says 2.19 Tapani version in settings, so the file is not getting patched

                                                                    Posts: 5

Finally Managed to install everything from Scratch on Windows 7 PC including tapani patch 2.21.1.

However, when opening with Mac & Crossover, it says that Full Screen Mode has some problem and make sure that directx is installed and so on.

My 2.19 Tapani CM0102 works flawlessly. dont understand what's creating this mac problem.

ⓘ **Data folder on MAC with Crossover**

Hello guys, I have a big problem and I'm not sure that there is a solution.

I'm trying to copy/paste the data about April2016 update. But I'm not able to find data folder on my Mac.
I use Crossover.

Someone can help me?

Thanks a lot! 🤭

Hi all

Ive got cm0102 working this morning on my mac using PlayonMac. But I'm having an issue whereby I can't click where I want to in the game or i have to click elsewhere and its delayed clicking. Any ideas how to resolve this please? So frustrating as the game is all there ready to play.

Cheers

Has anyone experienced a problem with the value toggles on transfer offers and contracts?

It seems impossible to get them accurate. You click the mouse and it flies through the values, and it's near impossible to get what you need.

Looking for some help with the Tapani 2.21 patch on Mac.

I have loaded the game to Playonmac and installed the 3.9.68 official patch and April 2016 update but I can't work out how to load the Tapani 2.21 patch?

Can anyone point out the necessary steps I need to take? Would be greatly appreciated.

You will need to install the tapani patch or use JL patch, if you read through this thread I'm sure it's detailed how to install it.

If you go to the search bar of this thread and type Tapani, there is a whole load of posts about it and how to install it.

Hi guys,

I recently re-installed the game but I'm on a MacBook Pro.
I've followed the instruction in the tutorial. I

2 questions :
1- The instruction about the Tapani Patch doesn't seem to work. Nothing happens after I install the cmpatcher into the Championship Manager bottle
2- After starting the game in CrossOver, when I try loading my current game, it says I need to insert the disc. Isn't CrossOver supposed to be a virtual drive ? I don't have a drive on the MacBook Pro. Any help is welcome ! Thanks.

I usually suffer from this problem - all you should need to do is run the cm0102.iso in finder, and then when you load up again through Crossover it will work.

Thanks for this it worked a treat!

However, i am having a headache trying to update the game. is it possible? I replaced the data files withing the WINESKIN wrapper but the game still loads with original content! Any help would be great.

evening Mac users,

Given my very limited technical knowledge, I've come across a few Macs and took it as a challenge to get the game working.

I've had reasonable amounts of success usually, through mashing the keyboard mostly.

My problem at the moment is not knowing where I can paste-over data files for the upgrade, using CrossOver.

The process for a patch doesn't seem to work.

Does anybody know where the data files are lcoated in the computer, and can you get to them after installing CrossOver?

It seems that it kind-of takes over...

...so maybe I'll just play with the original database!

Hey Masty,

I've answered this question on this very same thread so many times that I'm starting to think it should be a fixed thread.

Here's what you have to do:

1.) Open a finder window

2.) Go to "Go" and press "alt" the option to click on "Library" should appear. Click on that.

3.) go to "application support" - crossover - bottles - etc etc until you reach your championship manager data folder.

The rest is the same as a PC

enjoy!

If you have any further doubts feel free to message me.

Cheers

sounds pretty straight-forward! Will give it a go. Appreciate the help big-time.

Half the challenge/fun (coming from a 'non-IT' background) is getting it to work on different computers.

Thanks again

Memory System Error using Wine/Wine bottler on Mac

Hey I tried running CM games through wine/wine bottler and it worked fine for a while, then I got the run out of system memory disk space issue.

And it wont let me run as administrator/compatibility mode. So how do I fix this guys?

hi mate,

It's in one of those - 'drive_c' i think. You have to go back through 'Program Files', then cm0102, then it should be there...

Hi Mr Wadsworth
Did you find any solution to execute tapani on you Mac?
When I'm launching the .exe file on crossover nothing appears...

Downloaded the game and im using winebottler(playing on a mac)

problem: "Not enough free space"

How do i solve this?

I often hit the same problem - sometimes quitting the game and the emulator and then re-loading it works.

I basically can only have one game save running at any time. Bizarre really as you'd have thought modern day computers have far more memory.

i'm still using *playonmac* and having no issues. has *crossover* changed much in the last few years? i used it in 2013 but found it a pain in the ass and couldn't ever get patches or tools to work.

Downloading for OS X

Hi, does anyone know how I can download CM 01/02 for a Mac using OS X? Have tried downloading a virtual drive but Slysoft is PC only and Daemon didn't work. I'd rather not pay for one if that can be avoided!

27-12-16, 08:45 PM   #336

I don't think it's possible mate. Best way to play cm0102 on a MAC is using CrossOver.

Space on disc

Hi!

I'm playing CM 01/02 on my mac with an crossover installation. After not playing very long I receive the information about not enough space on the disc to play forward.

I have read on the forum but I can't find the solution for this. Please help me out.

Thank you!

Have you got more than one game save?

Have you tried exiting the game and also crossover, and then re-starting? It's a bit hit and miss with me sometimes.

I only have one game and I've played one and a half season. No I can't go any further. I have tried as you say to exit and restart but still the same message comes up unfortunetly

Downloading player update for Mac on Crossover

Hi there
I downloaded the game for Mac using Crossover along with the .98 SI patch
I'm not sure how to now update the players though?
I've downloaded the April 2016 player update but not sure how to put this into Crossover so I can run the game with the update.
Any ideas???
Thanks!
Jon

Hey Fods
I did - much harder this time - and found the solution! Epic.
On page, http://champman0102.co.uk/showthread.php?t=1115&page=5.

For anyone else reading this (as it seems tons of people have this issue), if you've downloaded the game onto Crossover on Mac and have updated it to version .98. These are the steps to take:

1) Download the latest player update from the updates section on this site
2) On your Mac, go to Finder and then click 'Go' in the Tool Bar
3) Hold down the 'Option' key and you will see 'Library' appear in the drop down - click this
4) Then navigate through the folders that appear as follows: Application Support --> Crossover --> Bottles --> CM0102(or whatever you named it) --> drive_c --> Program Files --> Championship manager 01-02 --> Data
5) Then go back to the update folder you downloaded, and copy all the files (right-click and copy)... and then copy and paste them into this data folder you navigated to above (Mac will automatically ask you if you want to replace each file and just click yes each time).
6) Voila! It will now work.

I have the actual Mac version of the game - found it online somewhere about 9 years ago and have played it happily on my old 2008 Macbook since then. Alas that Macbook is dying (I persevered for many years with half the keys not working and going through 4 or 5 batteries and chargers but now the backlight on the screen has given in) so I'm going to move on and buy a new one.

My question is would the .DMG file work on a brand new Macbook and allow me to install/play or are they now incompatible? I basically want a new laptop 90% to play CM01/02 and 10% for other stuff, I know getting a PC would be easier for that but I use Windows at work and on my wife's laptop at home and hate the current version of it. There's a couple of computer shops locally that sell re-purposed Macbooks from around 2007/08 so I can get one that will work if need be but ideally I want a nice, shiny new one!

Any help much appreciated, and once I'm up and running if anybody wants the actual Mac version rather than using Crossover or similar to run the game please feel free to message me and I'll see if I can share it (the downside is that I'm yet to find a way to run data updates so it's ODB only)

Nice mike. Be a great addition to the site to have a working MAC version

In regards updates the MAC patches only went to v3.9.65 where as the updates are on v3.9.68 so crossover would still be essential to play them anyhow

I think I've got it on a flash drive at home - happy to see if I can upload and send it over from my work computer

If we can get it uploaded if someone with a Mac would be able to let me know if it works on the current version of OSX that would be much appreciated (I used to run it on OSX 10.5/Leopard so not sure if it will be compatible with the latest version)

I'm on a MacBook Pro running the latest OS. Happy to give it a go if you can upload the DMG.

Currently downloading the Windows version to try and get that running but would be easier to use the native Mac version I imagine.

Great, I'll get it uploaded and give you a PM to work out how to send it.

The native version is easier, the only issue is that you can't use any of the data updates so have to play ODB. There's a few quirks in the game (only minor stuff like Young Player of the Year not being awarded some seasons for no apparent reason) but I've never had an issue running it

So I got my new Mac and I can confirm that the Mac version of CM 01/02 NO LONGER WORKS on modern versions of OS X. Because they don't support old Power PC programmes like CM 01/02 you would need a Mac with either OS X "Leopard" (i.e. any up to early 2009) or OS X "Snow Leopard" (i.e. any up to early 2011) with a programme called Rosetta installed

If anyone does have an old Mac that would be capable of running it I've got the files on my new computer so happy to share with you, other like me you're going to have to install using Crossover

Apologies if this has been answered before but the only issue I'm having playing with crossover is that when I try and set a transfer fee or basic wage the value is hard to control (i.e. pressing + or - makes it shoot up dramatically). Anyone know a way to combat this?

Yeah until now I have been paying slightly over rather than spend ages trying to get the exact value

I did, however, see that someone else had suggested adjusting the mouse settings in System Preferences (not just for CrossOver but for Mac in general). Going to try that, will report back if it works

Guys, i need your help. I was playing CM 01/02 for the last 30 days on my mac. The my test version of CrossOver ran out. I purchased the full version. Now when i start the game, it asks me for the CD. It never did that before.

Can you help me? Thanks in advance!

There is an easy fix for this, you just need to re-load the disk image (if you search for it in finder it should come up). I'll be loading my game up at lunchtime so I'll see if I can run through the steps for you

Yeah as I thought just search in finder for CM 01/02 and then re-open the CM0102.iso file - should solve the problem

Sorry to be that guy... but I've been clicking through the pages and I'm not sure what the exact answer is.

On a Mac, how do I download the game? Is this http://champman0102.co.uk/downloads.php?do=cat&id=3 what I need, or is that for PC only?

Do I need Wineskin/Crossover/Virtual drives?

Thanks!

Parallels on Mac or buy a cheap Windows laptop?

Hi everyone,

Apologies if this is covered in the tech support area but I couldn't find what I was looking for:

- I want to play the game, with the data update, speeded up commentary (a must), and coloured stats.

Would Parallels on a Mac let me do these four things relatively painlessly, or would I be better getting a cheapish Windows laptop to do the job?

Thanks in advance for your help!

Stu

You can do it with Crossover. Although you need one of the older version for it to work. There is a 14 day trial.

If you go this route an idle sensitivity optimized patch like 2.21 or Saturn is a must otherwise your mac will sound like a DC-9 taking off.

However playing on a windows pc is much nicer. And you can play other games as well.

Hi everyone,

I am using Crossover with the latest Saturn patch from a Macbook Air, but I can't do the tactics properly. I can't draw arrows in either overview or for with/without ball, and I can't even choose a different square in with/without ball. Has anyone experienced that? What do I do about it?

MacBook newbie needing advice

Total technophobe but managed to get 01-02 downloaded onto my Mac and start playing tonight. Not played the game for years but have tried reading lots on downloading patches etc but unless I have specific instruction I'm useless.

Is there any guides out there on how to install patches. All i have is version 3.9.60 but ultimately id like to be playing the latest update, just not sure how to go about it.

Id appreciate any help whatsoever.

TIA

Help... Idiots guide to installing on an Apple MAC

Hello everyone,

i am desperate to start playing this game.... i'm not bothered about having the 'up to date' players; i'm happy to play it from the 01/02 season for nostalgia purposes.

I'm not a tech person; and wondered whats the easiest way to download/get this game for an apple mac user? I have tried using google and its a bit confusing.... i wonder if anyone would be kind enough to give me a step by step (idiots guide) for me to play the game.

any help would be most gratefully appreciated. thank you in advance.

Luke

Enable windowed mode before running the game

Hello,
I´ve installed the game via CrossOver (Macbook Air) and when I run it flickers and I see the original screen for a second before it goes black and I see som pixelbars. I´ve googled this for hours and it seems the solution is to run it in windowed mode, but I can´t navigate to this menu because the screen is black when I get to this point. Is there a way to force the game to run in windowed through a command, or fix the flicker/black screen isusse by adding a command to make it run in another resolution?

1. Create a shortcut to the cm0102.exe (right click on cm0102.exe and select 'Send To --> Desktop (create shortcut)').
2. Right click on the shortcut and select Properties. There should be a Target line which will show something like "C:\Program Files (x86)\Championship Manager 01-02\cm0102.exe".
3. Add " -windowed" to the end of this line, without the quotation marks (make sure there's a space before '-windowed').

Oh my, your post helped me anyway saturn! The CrossOver program that makes you run windows programs on your Mac allows a command before you run the game. I´ve tried with "-w" and "-windowed" to make it work, but no such luck. Then I saw your tip about making sure there´s a space before "-windowed" - tried that on the mac, and it worked! Thanks a million 🙂

Help Needed

Hi All

I am trying to find a way of getting championship manager 01/02 onto my macbook pro, is this possible and if so some help would be required as I am not technically gifted on a computer.

At the moment I don't even have the game or know where to download it?

Thanks in advance

Download PlayOnMac (https://www.playonmac.com/en/)

Download the CM0102 ISO. It's on here somewhere

Download the latest official patch. It's also here somewhere

Install PlayOnMac

Mount the ISO. Should be the default option when double clicking the ISO file. If not right hand click and choose mount

In PlayOnMac, click on config. Create new 32 bit machine. After that's finished choose to install an exe file. Find the setup.exe in the CM0102 mount drive

Once that's installed choose to install another exe and install the latest patch.

You should be good to go. There's a really good guide somewhere on this site that tells you how to install the game. I'd search through and link to it but I'm on the train and near my stop

So I managed to get up and running on a mac! Woo!
I was wondering if someone might be able to help me with downloading some tactics to look at. I'm very curious as to what makes iodine tactics so good etc as I've tried some wib wob of my own and am doing well but not unbelievably well. When I try to download any tactics I can't seem to find a tactics folder to put them in etc on the mac. I'm probably being stupid again.

Hello,
I followed this link https://champman0102.co.uk/showthread.php?t=10794 , but I still have error messages:
"v3.9.68T Langlib..cpp 479"
"v3.9.68T game_config..cpp 131"

And I do not know which .exe file to use

Someone can help me ?

Hi,

Thanks for all the posts. Followed the above but came unstuck with the setup.lid error (105).. Does anyone have any ideas?

Hi All,

Have installed cm0102 in my MacBook using Crossover and have also installed GK save game editor, does anyone know where crossover hides the save games? Need to specify the location for GK.

Thanks

Hello - I've got a MacBook air - I've managed to get the game and the update 3.9.68 update in place - As soon as I open the application on play on mac, it loads but then freezes or take some time to load that page, maybe a minute. I've looks for hours for a solution but I can't seem to find one. I must be missing something but I have no idea what to do next. Please help

Manage to install the latest Patch, and after 17 years it's like I'm playing the game for the first time again! But unfortunately, after the season updates in July, the save game crashes ☹ Playing on Mac with Crossover (Windows XP compatibility).

Has anyone experiences with this issue on Mac? Help please!

Mac memory issue during game play

Hi

I keep getting the error "does not have enough memory to run the game" after 2 seasons, I have searched these forums but cannot find an answer. I am running the game on a mac via the virtual wine drive

many thanks in advance
Paul

Memory Allocation Error   Unable to allocate requested memory.
Debug Info: v3.9.68T contract_manager..cpp 4158 (CONTRACT_MANAGER::add_decision_date() : cannot create space)
This is caused by a lack of system memory, you can increase the amount of memory available by freeing up more diskspace (for virtual memory), cl****** ****tive programs or upgrading your hardware.

Ok

You either don't have enough storage or you have an editor open in the background

I've used both Crossover and PlayOnMac and both have trouble loading saved games. That suggests the error is with Wine itself.

I imagine there must be a way to allocate more memory when setting up a Wine bottle but I haven't figured it out yet.

I am also having problems with saved games crashing.

I've had three saved games crash. Two get to the latter stages of the loading screen then say the game has encountered a serious problem and shuts down. The third and most recent one was a memory error first... then followed by the same message. There is no pattern in the games times either, one is about 3/4 of the way through the season, one is one match old, the other I'd just finished my first season.

Running Tapani v2.22 + Saturn 6

Is there a setting somewhere that determines how much storage is allocated to Crossover/Wine etc.

Maybe that allocation is too small?

Hi all. Was going along fine playing CM 01/02 original version on Mac (both on Crossover and Play On Mac), with all leagues optimised and going deep into 9/10 seasons.

However, I've recently encountered a problem where the game will load up and within seconds of the main menu appearing my screen will either go blank or turn to a load of scrambled colours.

I've reinstalled several times and the same problem occurs with Crossover and Play On Mac. Any suggestions?

Play game in a separate window - MAC

Hi gents. Downloaded the game and it works perfectly. Just wondering if anyone knew how to play it and still be able to access other programmes? I have to keep exiting the game and re-entering. Can't even see when my laptop is running out of battery. I've tried creating virtual desktop through wine but that hasn't worked. Any help would be greatly appreciated.

Joe

Sounds like you're playing in 'Full' mode. You can change to 'Windowed' mode if you go to 'Game Options' (left menubar in-game) > 'Game Settings' > 'Screen Mode'.

Or if you're just on the main menu, 'Game Settings' is one of the options on there.

Well it has actually worked. It is now loading in a window. However the screen behind it is black and if I minimise the game it disappears forever so have to re-start the computer. Thanks for your help I will keep trying.

I'm running CM01/02 on a Mac using PlayOnMac and a downloadable Windows version of the game software. In order to play the game, I have to run the cm0102_GDI.exe (rather than the regular game .exe) which is fine if playing the patched 3.9.68 version, but I want to play with the updated game data from March 19. But it doesn't work without a compatible, updated GDI.exe - How can I get one?!

Hi you awesome people,

I have been playing CM01/02 for years and never had problems until now with the latest March update. Its a strange problem where saved games can't be loaded. It have happened for several times now with different saved games. The length of the saved games have been different, one worked 5 seasons, one just 1,5 season and so on. I find the file (saved game) but when I try to reload it, everything crashes without any error message and the game quit itself.

Im running CM01/02 on a macbook air with Virtual Box, so the system it runs in is Windows XP. I have the 3.9.68 version and only updated and installed the Mars 2019 patch, no other patches.

The game has always worked for me and Ive never experienced a problem like this. I always play and download the new player updates when they come, never been a problem until now. If you have any solution on this problem, I'll be the luckiest guy in the world.

Thanks,

Can someone explain, in simple terms, how to install the March 2019 add on to Mac. Been trying for hours and nothing works. Is there a link to the Mac installer?

I watched the video tutorial and followed it exactly, but the game just crashes as soon as open it. Just get a black screen.

Don't know anything about Corssover, but I'm assuming you're ultimately running the game on a virtual drive - try remounting the CM01/02 .iso on it. Judging from previous posts, this can be done by either double-clicking the virtual drive or right-clicking it and selecting 'Mount' (or similar).

I've been trying to install with these instructions: https://macretro.co.uk/2017/09/05/in...n-mac-linux/2/

I get to the fourth paragraph - *Once you have installed the game switch from the miscellaneous tab of the virtual drive to the general tab. Select the "Make new shortcut from this virtual drive" button. This should identify the CM01/02 executables – install a shortcut to the game now.*

When I create the shortcut I get a message saying 'scanning the virtual drive' and I can;t go any further.

Can anyone help?

Hi guys! Having troubles again. I got the game running on crossover on my mac. I started editing the players in the editor. And it worked well for quite some time as i wanted to edit as many players to actual players. But now it crashes every time I start a new game on "assessing club squads". What can i do? how can i find the mistake in my editor safe that makes it crash?

and is there maybe a prepared database that i can import via crossover?

Hi Guys

I've been playing CM 01/02 on Mac via Play On Mac. It's been working fine up until now.
Everytime i try and save the game i get the error message: 'There is not enough free disk
space on Drive C: to save the game. Please free up some more and try again'

I really don't want to lose my saved game and I can't seem to find any solution for this for
playing it on Mac/Play On Mac. Any ideas how to fix this?

Thanks

The game is working well at my side but...

Since a long time and many many tests, I DIDN'T SUCCESS to install Tapani patch (whatever the version) neither by using Crossover nor
PlayOnMac...

(cmpatcher-2.19.exe or cmpatcher-2.21.1.exe or cmpatcher-2.22-wip0.exe .... same result)

with CrossOver : Nothing happen with Crossover when launching these .exe.
with PlayOnMac : the following error is displayed when executing these .exe : *"PlayOnMac has encountered an error ....."*

PLEASE HELP.....

When I try to start a new game I get an error message. Something about "heavy problems / programm has to be stopped immediately"

I worked a lot on the editor. Can anyone help with this?

data update october 2019 on mac

hello everyone, can you help me to install the october 2019 update on the mac?
do you know how to do it?

Hi!

I download the game for my Macbook.
I followed the instructions by the tutorial and I am using PlayonMac.
When I want to install the game I get an error. V3.99.60 Langlib..cpp 389 and V3.99.60 game_config..cpp

What can I do about this?

Has anyone ever managed to get the cm color editor to work on a Mac? I've been trying to get it to work for a while now so I can make the game look a littler sexier but with no luck. Currently using Crossover to run the game. Any help would be appreciated.

Anyone out there on a Mac that could let me know if it's possible to change the colour scheme?

Hi,

Apologies if this is already covered but is it possible to apply the +v8 patch from Saturn to this game on Mac?

I am running using crossover. Would the Psmith instructions work?

Long time no see CM0102 community. Hope everyone is well.

Tried to fire up CM0102 for the first time since the last OS update and nada. It just doesn't work. I've downloaded a newer version of *playonmac* and will probably have to start again from scratch after removing all CM0102 stuff I have.

Was never able to get it to work with *crossover*, only *playonmac*. Now, I've not tried anything on *crossover* for at least four years, maybe longer.

Well, *playonmac* isn't working anymore either.

That sucks.

Might have to go back to crossover.

So, after a day of trying, playonmac doesn't work in anyway shape or form.

Trying crossover and while I can get the game to work, I can't apply patches or data updates. The instructions I can find are outdated for the current version of corssover.

Does anyone have insight into how these can be done on the latest verison of crossover?

How does crossover allow you to get to copy/paste the data files for that data update?

This is the updated version for getting it to work on a Mac. I've just been playing with the .68 version of the original database.

Thanks.

I actually managed to get the latest update working on crossover. I'm gonna try to get the tapani patch to work (love those different colored numbers).

If I can't get CM0102 to work the way I want before the end of the crossover trial, I'll try the suggestions in your link.

My crossover trial has ended. Looking for other options but if not will probably just buy it when I get paid next week. Let me know how you get on.

So, I have the Tapani-patch working and CM Explorer.

I've long wanted to be able to get the ability to change the start date and at some point, I think I read about being able to remove the second group stage of the CL - which I despise.

Unsure the second group stage can be removed. Always assumed it was hard coded in and there forever. Any chance you've managed to get the cm colour editor to work?

You can download a program called cross over and play it through that. It only gives you a two week trial though and after that it is around £18

Actually i seem to be too dumb to install it with crossover. can anybody help me with that? i don't understand that program. how do i do it?

Edit: Got this to work finally! Now my question is: is there a patch to bring in a roster update for the actual season? 2001 is nice, but 2019 would be awesome. anyone knows about that and how to install?

Hi,
got the exact same question.
First I tried to install the Tapani Patch but it always return error 255 or another cryptic error.
Then I tried to go with Saturn's Version and the Data update was easy but it's not possible to run the cm0102patcher.exe. If you install it in a new bottle it won't show the CM01/02 data because every bottle emulates a new c drive (I guess, I'm not an expert). If you try to copy any of the patcher files to the existing bottle 'Championship Manager 01/02' (or however you called your installation bottle) then nothing happens. If you run any patcher file manually it shows the above mentioned 255 error.

It would be very cool if someone knows how to fix this. Game works but having Neymar or Mbappe worth 17,75 mio € doesn't seem right and playable for me 🙂

Thanks for any help!

Ive installed the game onto my Mac OS X using Play on Mac as instructed & installed the Patch but when it comes to start screen the mouse stops working properly, not allowing me to select various leagues or tabs on screen & keyboard does not work correctly. Any ideas on what needs to be done to fix this? thanks

Hey there silkyno10

You should give Crossover a try, it works smoothly with cm0102.

The Following User Says Thank You to Paiva For This Useful Post:

Ok may sound a bit of a simpleton but what do i do with Crossover to make it work? :-)

Ok I've used the tutorial to install with crossover and works until the Start New Game button then screen exits to desktop & then returns to Black Screen with Football cursor and then crashes. Any help would be great rather than going to buy a new Windows Laptop 🙄

So I downloaded this on my mac today and I'm running it through PlayOnMac. However, once loaded the game uses in excess of 100% CPU and my laptop gets hot pretty quickly. Has anyone else experienced this? Is there any workaround?

Hey,

Could some kind soul help me out?!

I'm trying to run CM 01/02 through CrossOver and I've followed the instructions, however once the installer bar gets to half way, it stops there, my mac gets really hot and nothing else happens.

Any suggestions?

Thank you

I can get the original version working fine through PlayonMac, but how on earth do you update it to the current latest data update?

edit: Got it to run the 3.9.68 patch but struggling to get any further than that?

Any other alternative to PlayOnMac that people know runs the latest data update?

EDIT: No matter, I've done it. This is AWESOME!

No problems with Crossover so far.

Just did the standard crossover install.

I'm having a complete brainfart.

Using crossover.

Trying to put a different data update into the game.

I've played around and am drawing a complete blank.

EDIT: Immediately after posting this, I figured it out. D'oh!

Hey! Having some issues initialling the v3.9.68 patch through Play On Mac.

When i run it through the .exe through the virtual drive it does this
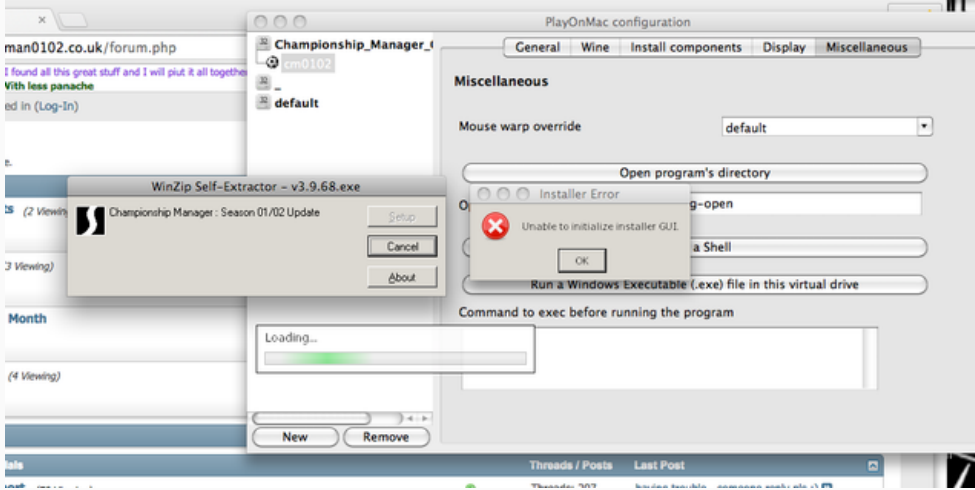

Then when I click OK it then brings me to this.
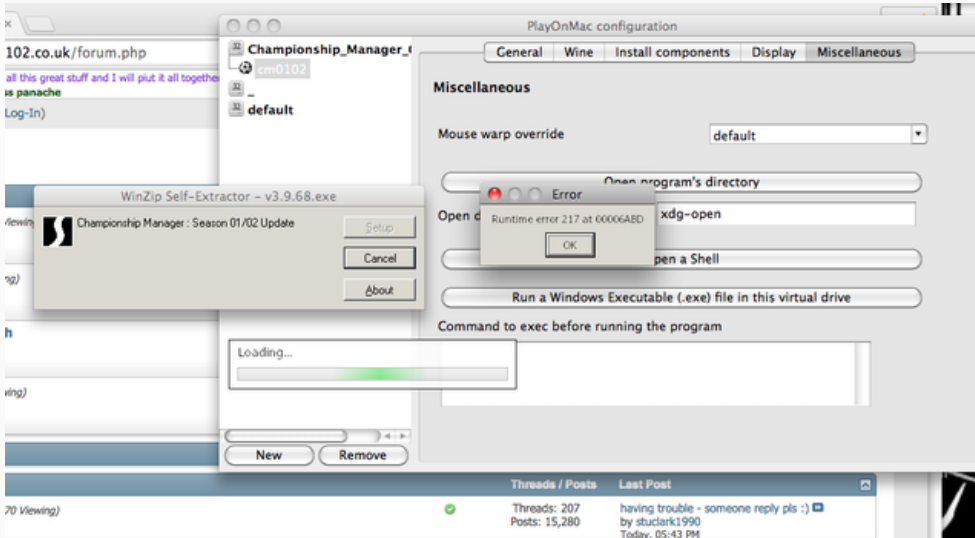

Any ideas on how to sort this out. Play On Mac has been pretty good to me so far, first time its acted up.

HELP 🙈

I downloaded the update using the links above and using a Youtube video from a guy called MacRetro.

Got the game installed and the 3.9.68 update done too but couldn't figure out getting the Saturn Patch figured out.

Any help would be fantastic or if there is another, better patch I could use.

Stay safe folks!

Bottom line here though for Mac users is we need a virtual Windows machine to run the game? Crossover/Parallels or whatever - does that then mean buying Windoes XP or whatever they use now? There's no file created to just run it straight on a Mac OS?

You can download crossover for free and play the game on that.

Installed the game using PlayonMac on my 13" MBP. Is there a way to "switch screens" back to my regular desktop while playing the game?

Right now I'm sort stuck in game unless I quit. Not helpful when I'm trying to either do other things or am needing to access game tools etc.

I'm not good at MAC, I am just using it to play CM0102 (it's not mine). Put if you Alt Tab (so on a mac it's ->| symbol and cmd key) you can cycle through open windows. So if you select another open window it will take you back there and leave the game running. At least it does for me.

Should have mentioned I've tried the OSX equivalent of "Alt+Tab". It works, in the sense it drops me back to my desktop, but I cannot from there get back to the game screen. For whatever reason, it either won't maximise back, or if it does, the screen goes black and I can't do anything else but force close the game.

I do have Parralles install on my Mac and Windows 10. Have set the game up on there and it works fine. Was just hoping to find a more efficient option without the need of having two OS's essentially running at once.

Hey folks,

I'm using playonmac to run CM0102. I can get the game running fine, but the update not so much... It seems to say I'm on the latest

version in the game, but Jussi and Okocha are still playing for Bolton

Hoping there is a simple step I'm not following... Would really appreciate it if anyone can help me out!

Here's a 2 minute video of what I'm doing at the moment: https://www.loom.com/share/03fc46dc3...3a2c0abe8e9cb4

Hi

Does anyone know if it is possible to play network games if I host, from on a Macbook running the file with Crossover, with someone on a Windows laptop?

I've managed to create the game, and matched my IP on ~net.out file with Hamachi. When in Champ the IP shows as per Hamachi, but when trying to join from a Windows laptop it is saying the network game could not be joined.

Thanks

Install on MAC Yosemite - Help needed for someone who's Conference Level !

Hi guys,

I'm pretty useless with all this technical stuff - tried a couple of the YouTube help videos but still struggling to install on my MAC. I've downloaded the game and PlayOnMac but just not sure what to do next. Would anyone out there be able to guide me through or point me in the right direction, would be much appreciated.

HELP!!! Can't install CM 01/02 on Mac Catalina

Does anyone have a workable solution to play CM 01/02 on Mac Catalina?

Macbook + Crossover + CM01/02 + March 2020 Update

Hi guys,

I'm a newbie. I'm using Macbook with Catalina.

I've downloaded the game, got the SIGames patch in. I've got the March Data in and loaded a game - looks brilliant. All the players are at the right clubs. The issue is the league names and competitions. I think this is fixed with the Tapani patch, but struggling to get it to install on Crossover.

Any tips?

Simon.

The command "/Users/simonbourne/Documents/Simon Bourne - Downloads/cmpatcher-2.21.1/cmpatcher-2.21.1.exe" returned 255.

How do I play on MacBook?

Hi Guys, I apologise that I'm sure this must have been asked already...I have tried search functions but can't seem to turn up what I'm looking for.

I'm trying to play on a MacBook Pro and as soon as I clicked the Setup.exe I got the message that Windows applications can't be run on Mac OS.

Can someone provide me with an idiots guide to get this going on my Mac?

Am running HighSierra.

All the best - Tom

There's no easy guide as no-one has ever really made one.

There's one thread for macs and it's here: https://champman0102.co.uk/showthread.php?t=1115

Hi I've been playing CM0102 on Play on Mac, but now when i click on the .exe file to play the game, PlayonMac says 'Waiting for XQuartz' to be installed, but never moves beyond that screen. Has anyone else had the same problem, how do you fix?

Thanks

ℹ️ MAC - Play

Hi all.

Relatively new to this site. With the whole work from home thing going on, and unlikely to change anytime soon, I wanted to give champ man a try again.

I do have a Mac.
I have downloaded the game, no patches.

I have downloaded Play on Mac, but this is as far as I have got with things.

Thank you
Gareth

I get that all the time, you don't need to install it, it works fine. But you can't get rid of it trying to install for some reason.

Hey guys, I think I've found a solution. You just have to take "setup.exe", not the whole folder. Then you can install the game. And don't be surprised: because of the resolution it is very hard to point on the wanted spots. You have to change the game into "window mode", but it is a bit tricky.

PlayonMac should still be there in the background on a different window, or just try opening it again. The XQuartz thing is always going on in my background even when playing the game.

I can run the game two ways on my MBP.

1) Using Parallels and installing Windows on that (I'm using Windows 10). From there, you basically just install the game as one would normally do on a Windows PC.

2) Download and install Playonmac. Then I followed this YouTube video to get it running from there.

I tend to play the game via Parallels at present, largely because I'm able to switch screens and continue doing other things. When using Playonmac, I've not managed to find an effective method of switching screens - essentially means once your in game that's it. If you want to do anything else, I have to quit the game first.

Hey folks,

I'm using playonmac to run CM0102. I can get the game running fine, but the update not so much... It seems to say I'm on the latest version in the game, but Jussi and Okocha are still playing for Bolton

Hoping there is a simple step I'm not following... Would really appreciate it if anyone can help me out!

Here's a 2 minute video of what I'm doing at the moment: *https://www.loom.com/share/03fc46dc3...3a2c0abe8e9cb4*

Anyone? I'm desperate 😳

Anyone? I'm desperate [emoji51]

In that video you have downloaded the .68 update which is only the first update you need. After that you need to download the March 2020 update. It is a data folder and you just copy and paste that into your existing data folder that is found in the Championship Manager 0102 folder.

🙂 **CM 01/02 works with crossover and daemon tools on Macbook Catalina update**

Just wanted to make a thread that people can find if they wonder about how they can make CM 01/02 work on Macbook with the catalina update etc. I have myself used alot of hours to find all the information i needed the first time (before catalina) and this time to make things work properly, so maybe this will make it easier for other people when they search with key words on google.

If you want an option that works 100%, and where you dont need to go through all the hazzle with free virtualbox, paralells etc that is often recommended (In my opinion Virtualbox and paralells is c... Paralells makes the macbook go super hot, and virtualbox is a mess + makes the mac work more) then just do this :

- Download Crossover V19. (A simple program that is very easy to handle for everyone and dosent mess anything up)
14 days Trial, after that you need to pay 40 dollars to own the current version. Crossover is up to date with Macbook catalina, i have tried it and play CM 99/00 and CM 01/02 without problems as we speak. 🙂 I also used it before Catalina update.

- Download Daemon tools for free. Use this to mount the games.

A small guide:

1.

Download the games from this forum or search on google for a free download of the games.

2.
- Open daemon tools, Click on quick mount in down left corner.

- Choose the iso file (CM99/00_REL or CM 01/02.iso for example).

- When its mounted click the new image that popped up as a CD plate next to the quick mount symbol and + symbol.

- Find the CM exe setup file in the new window that popped up after clicking on the previous step, right click the file and choose open with Crossover program.

3. Crossover will open up.

- In the "Select an Application to install", just type inn for example CM 01/02 or whatever you wanna call it, your choise.

- Then under "select installer source" (next step), the correct file should be automatically chosen. (Setup_exe)

- Next is "select bottle. Choose Windows XP bottle 32 bit. (It says New windows XP bottle...).

- Then under "install and finish", just press install in the bottom right corner.

- Then install the game in a normal way, it pops up for you automatically.

If you get a problem later with the games saying " You dont have the CD" when you try to start a game (usually happens if you have rebootet the macbook or havent played the game for awhile after closing it), just do this :

- Open up Daemon tools
- Right click that CD plate you made before (next to the quick mount and + symbol) and choose unmount.
- Then on the same area, look up and u see the CM iso or REL on the NAME section, right click on the one you want, and choose MOUNT. Now you see that you get that CD plate back where it was before, mounted.

Now you can play as normal again. Its fast and easy.

Other things :

Tactics.
Download the file you find on this site or other sites, extract it with Keka program for example. https://www.keka.io/nb/o
You need to place the extracted files on the tactics folder that is hidden.
Go to your desktop (main screen on macbook), choose "GO" tab on top, hold down the ALT button (next to the CMD command button) on keyboard and you will see "library" pop up, and choose it.
Choose the Application support folder.
Choose the Crossover folder.
Choose the bottles folder.
Choose the CM 99/00 or the CM 01/02 folder.
Choose the drive C folder.
Choose the Program files folder.
Choose the Championship 99-00 or the CM 01/02 folder.
Then scroll down and find the Tactics folder.
This is where you place the tactics files you have extracted.

On CM 99/00 i find it best to use 4-1-3-2 formation. The three on center midfield got arrows pointing up. Hard tackling, offside trap and short passing (or direct). Its also recommended to customize the "with ball" and "without ball". I recommend watching this guide video : https://www.youtube.com/watch?v=A9uDxW_iRCs

I have also read that people recommend 4-4-2 on this game, but also using 1 or 3 strikers.. A formation with 4-1-3-1-1 can work with attacking wingbacks, same as 4-1-3-2, just that 1 striker is on AMC instead, the midfielders dont have arrows up (or maybe the two on the sides got arrows up) and the fullbacks are lifted up on the field on line with the Defensive center Midfielder.

There are some tactics you can download to this game, i think i have found all that works, but they are booring for me, not any fun to play with.. They got all players in center with arrows up and 2 defenders etc.

CM 01/02 tactics:

There are some big packs on this forum to download.
The tactic that has worked best for me, thats fun to play and makes you win, is the tactic TU-160M2 found in the RTL tactics pack : https://champman0102.co.uk/showthread.php?t=10031

This is also a nice one.
http://champman0102.ulcraft.com/tactics

Thats all i think. Have fun 🙂

Data editor for MAC

Hi Guys

I have downloaded and running CM0102 on my mac through PlayOnMac.

Does anyone have a guide to how I can run a data editor on this? I have Graham's Save Game Editor and can install it but cannot find it via play on mac.

Any advice appreciated!

Ric

MAC - Cannot play, screen froze

Hello all,

I recently downloaded CM 01 02 on my mac and after following tutorials on how to set up the game on PlayOnMac and CrossOver I still have the same issue after I installed the game.
Once I run the app, I have a frozen screen, the sound is here, but no display.
I read many topics but I still cannot see the issue, could someone help me?
If there is any way to force the windowed screen, I would be glad to know.

Thanks

Hi Ric/guys
getting this message after downloading Playonmac:

"PlayOnMac" cannot be opened because the developer cannot be verified.

Any ideas??
Thanks

Mac - Downloaded windows on Virtual Box

Hi guys

After lots of faffing, I managed to get windows 10 via the virtual box and download cm 01/02 and played a season. However, since my save, it is now asking for the cm disk?

Can anyone help?

Cheers

C

By just replacing the data folder. Copy the new one and paste it into the championship manager 0102 folder and click replace. Unsure what else you might have done differently. I've noticed that if I've installed the game multiple times you need to ensure you are putting the data folder into the correct game you are opening. Maybe do a search and see how many championship manager 0102 folders you have just incase you've tried installing it more than once.

I've also the tapani patch before hand. Unsure if maybe you need that first before moving the 2020 data folder over?

I'm playing the original Cm0102 on my old mac but because of a bug some league that have been run in background are f*cked. Everton for example only are allowed 4500 in Goodison Park and recently Burnley were taken over and debts of 3.8 BN were cleared,

I wanted to repare my saved game but that seems not possible. Greame Kelly's doesn't work on Mac and after copying my saved game to a windows PC GK editor is stuck in the loading proces at step 0 of 27.
Are there any other tools I can work with?

Yes, this is the solution, you need to choose installer file after naming your bottle.

If you want to patch your game, you need to right click the bottle and choose "Install software into", then choose the patch .exe file.

Another trick is when you're done installing the original game, if you right click the bottle, you're able to duplicate it.
The duplicate can be renamed to CM Update or something, and you can update that bottle.
This will give you a bottle for the original version and a bottle for the updated version.
If you want different patches, data updates etc, you can just create several duplicates, an rename them to keep track.

The Following User Says Thank You to hog88 For This Useful Post:
