Messed up Editing the Database

Hi. I work in a enhancement project from the original database (not an update) and yesterday an error ocurred when saving data. Although the game can be started normally, I cannot save again with the editor and through validation process the following ocurred:

// ----------------------- //
// Step 8: Table alignments //
// ----------------------- //

Data table (common_names) was not aligned.
Fix failed: Table still not aligned! (1 items re-aligned)

Can anyone help me on how to fix this problem? For example, when I load the DB, common names appear normally at the editor. When I try to reorder them, they appear randomly. I use cm0102ed for editing

One of the 1st, 2nd or Common names will have created a rogue version on itself. Filter the names until you find a blank one and delete it. Also find any 1st, 2nd or Common names with 0 in the Count and delete them.

Make a back up by using the Distribute option in the Editor first

Well, I tried what Dermotran said but it would endlessly wait for deletion of a blank common name. If by any chance anybody wants to help me, I have uploaded data at 4shared - http://www.4shared.com/zip/MTmTeNFC/...ase_Upgra.html

As far as I remember, there was an access violation message after entering 1st name 'Stephane' (nation Gabon) and it does appears as a 1st name with count 0

For some reason all Gabon players got a 'hidden' common name. I added the common name '123' to them all then deleted it from them.

Weird error, nothing worse to ruin a few hrs updating!!

victor040190
Unattached

Yeah, the "access violation" message appeared just after I entered the first name of a Gabonese player, probably that new player was the cause of it all. Once again, thank you very much for all help 🙂

Whatever you have the issue with (first name, second name or common name) filter the problem area but dont enter anything for the filter. You will have loads of blank names for different countries, delete them. Then press Staff. Go to Tools, Validate Database. It will take awhile at 1st but then it will show no errors for whatever area the issue was for

Thanks. When I try this I get the message "error: Id existed in filter but not proper container"

Ok it works for the ones with low counts but if I try to delete any with count 100 it just stalls at the delete stage. I left it overnight but it was still deleting when I returned (and there are several of these)

Sorry mate, have never fixed that issue on that scale. Normally its either first, second or common name not 10 or so of each (nearly 50 for Common Names). There's also something wrong with the staff configuration file too

Since it's just the ODB data, you can download it again from here - http://www.champman0102.co.uk/downlo...do=file&id=119

Thanks anyway. My plan was to edit the ODB so the players resemble how they actually turned out in real life with hindsight. Are there any in circulation like this?

beadybea ○

Well today I did a full reinstall. Loaded up the editor and it's the ODB but all the blanks are still there. I think I'll stick to a patch!

Index issues

Guys I have been editing the database recently and I have gotten two errors, its pissed me off as I have been making something that I have spent hours upon hours doing.

The following has occured

v3.9.68 ger_second..cpp 74

v3.9.68 ger_cup..cpp 77

Now I havent changed any teams around all I did was move players about.

Any ideas how I can fix this?

I reckon you have overwritten 1.FC Koln by mistake, are they still in the DB? If they are not there is not much you can do. You'll know when you open the Editor, click Comp tab and see how many clubs are in 2nd division. I reckon it will say 17/17 instead of 18/18.

You can try add them back in but don't think it will work

Yep spot on, bloody hell your right I did delete them, how on earth did I do that?

I tried to add them in, but it says club comp is full.

Ahh bollox lucky for me I did save it but most of the changed I did today are lost now, bollox.

I think I better upload what I have, you see I was making a 91-92 database - I have been working on it since the start of the World Cup, I have done shit loads of work.

I am currently on Germany, i have done Argentina, Australia, Belgium, Partially Brazil, England, France, Italy.

You could using Tri-Wasano Editor to add them back in perhaps? It might work. Needs to be exact Long Name and Short Name

Yes there is a flaw with the filter in cm0102ed.exe, you need to reset the filter after you use one. The only <u>guaranteed</u> way to do this is press a different tab to the one you are using. So Club, press Pers. to reset, Nation press Club. (doesn't matter, just make sure it's a different tab)

It's actually only long name that needs to match, short name can be amended without a problem.

Champions League / Europa League spots bug

Hi all,

I'm playing with Liverpool at the moment, allready 6 seasons gone, but I have to become champion to play Champions League.
Second place is UEFA cup access, al other spots for Champions League go to champions of the second, third and fourth league.

Is this bug a known issue? How can I solve it?

Thank you in advance.

Here you go.

Let me make it clear, if Wolves for example becomes champion in the second division, they play champions league.
Before Liverpool I managed Herta, when I became champions in the 2.bundesliga I was also qualified for champions league. Very bizar.

Did you give a manager a future transfer in the Editor? (have seen something similar when we tried to have Guardiola transfer to Bayern)

We don't think so. The error stopped when we erased that "corrupted" file and started a new game.. however we got another problem: v.3.9.68 file_list..CPP 177 (File_LLIST::add_node() : could not read next offset), i've opened a new thread on that as well.

We are currently using the .68 in windows 7, we also have editing some players, arenas and clubs ourself trough the editor after we installed the patch. However we can press "Ok" on the error and then continue as usual with no problems so far..

The editor which came with the game, the editor name is cm0102ed. Is there anywhere I can see the name otherwise? And can I somehow see what causes the error and if I can fix it?

Not much I can do with this I'm afraid. Since its either ODB .60 or .68 you can just get the data files from the Download section copy them to your data folder and it will reset whatever is causing this error

.68 http://champman0102.co.uk/downloads.php?do=file&id=119

.60 http://champman0102.co.uk/downloads.php?do=file&id=57

The other option is a clean install

Problem with editor and also starting new game.

Hey,

I only found this site a few days ago. Sorry for my lack of knowledge... I have tried to find the answers to my problems on the forum, but can't find anything.

Downloaded the game and I was playing it on a clone drive. Everything was working grand until I decided to tweak the editor. (I remember doing this back when I used to play the game years ago - so thought I knew what was doing)

Anyway, now I seem to have messed something up. After making some changes within the editor, I clicked on the "save - as" option, and gave the database a new name. I thought this was what you were meant to do so you could have a separate database for the new version alongside the original database.

Now I cannot enter the editor anymore. (just gives me an error message). I also can't start a new game either. (another error message).

I can still load saved games and quick start games. But also what I don't understand is that I've un-installed the game completely and re-installed it... but yet the problems still persist. And also my saved games and tactics are all still there - even after a fresh install. (which I really don't understand? How can I completely un-install the game components and still have saved games & tactics?)

Any help appreciated guys! Thanks in advance!

You need to uninstall and delete everything to do with the game before reinstalling.

Save games, tactics etc you can save to a different location, but everything else must be deleted before reinstalling.

Database base 95/96 error

Hi all,

When i load a new game all player positions are set as FC.. However in the editor they are correct.

What could be wrong and how to rectify?

i posted an earlier thread about a different issue, however i resolved this and cant seem to close it.

What had you install before? If it was a Tapanified Database e.g. 3.xx database, you can't copy over it.

A clean install is the best suggestion. Just rename the old folder then reinstall the game, 3.9.68 patch and add the 95/96 data

Messed up Editing the Database

hi there guys,

Im using windows 7, ive done compatability and run as admin etc!

Im having problems with data loading into my database, i dont know wether its a memory thing or not! Ive done cmdbsort and validated database.

I have added loads of chairmans onto the game and deleted loads so its not as if theres more data than before on the game, infact probably less!

So, when i load my game some of the chairmen dont load, ive got it on max database and selected all the leagues apart from Argentina, Northern ireland and Rep Ireland.

Please could u help me so i can have all data load.

thanks.

Have you done compatability and run the editor as Administrator ?

I suspect that your changes have been saved in Users - User - AppData - Local - VirtualStore. (it might be a hidden folder)

VirtualStore is some Microsoft bollocks to piss you off and stop you saving in Program Files if you are not admin.

The artist formally known as The Eejit

I'd still check the virtual store. It does look as if you are picking up the unaltered database.
Alternatively make another change, say a change in a teams colour, and see if you pick that up. If you do, then it is something in the loading of the data that I doubt that anyone will be able to sort. If you don't then you need to find where the editor is saving your data.

ive managed to sort the issue out by choosing less leagues. all my data loads into the game now, however now theres another problem.....

the Chairmans attributes are different to what they are in the editor every single time i load the game,

any ideas guys?

I just had this error in my Pool/Swans game - no idea why - have never used an editor!

Seemed to have clicked through ok though

The game suddenlly shuts down with no errors...

Just like the topic says.

I am using march update with 2.21 patch along with the CM3editor.
It's installed on a win 10 machine.
So I managed to play the full season starting year 2015.
When I click "CONTINUE" on a 1 july of 2016, the game just crashes with no errors whatsoever.

Might be something you did with edirotr?

Can you use March uodate and start in 2015?

Tried holoidaying past the crash?

I used CM3Editor, not a in game editor.
It was stuck on that date.
When I used Holiday mode, it went past the date and now its stuck on august 1. But still, every time I click on news and contiune it just shuts down. I did used the tapani starting in the year 2015 with march update.

Problem with names!

Guys, after I modified some surnames of the DB, the game shows me the same surname for all the players in gray! How can I do?

Giorgos Ismael error

Ok, I saved a game (Ajax) and put my computer to sleep with game still open.
I returned a few hours later and battery had run out, so turned computer back on and reloaded save - unfortunately when I progress with "Continue Game" the game take forever with "Waiting for other players" before finally exiting game without any other messages.
When I check last game both line-ups seem to have changed to all Giorgos Ismael, injured after 1 minute and 0-0 result.
What happened?! Help!!!

Try this: First, make a backup copy of your save just in case (hoppefully you didn't put to
sleep while it was being saved, and hoppefully you didn't save the game again after you
turned your computer back on). Then try to open the game and then click to exit the
game without loading your save. Then open the game again and load your save and see if
the bug is gone. If not gone, then uninstall the game, delete the game folder, and install
again, apply the same patches you had been using, and load your save, that should work.

Original 3.9.68 database validation fixes

Hi there!

Is it normal that if i patch to 3.8.68
And open editor, validate database, there
Are a lots of fixing in db.
Its so strange, delete clubs, comp history.
Any thoughts ?
